

- 1.-> How many people are in each unique state in the customers table?
- Select the state and display the number of people in each.
- Hint: count is used to count rows in a column, sum works on numeric data only.

```
select state, count(state) as count
from customers
group by state;
```

- 2.-> From the items_ordered table, select the item, maximum price, and minimum price for each specific item in the table.
- Hint: The items will need to be broken up into separate groups.

```
select item, max(price), min(price)
from items_ordered
group by item;
```

- 3.-> How many orders did each customer make? Use the items_ordered table.
- Select the customerid, number of orders they made, and the sum of their orders.

```
select customerid, count(item), sum(item)
from items_ordered
group by customerid;
```
